

Dining in style...

SAMICO
Building business and technology relationships.

...works for you

POWERACCOUNTING

- **Easy to use interface**
- **Highly customizable**
- **Streamlines order routing**
- **Superb cash control**
- **Optional inventory manager**
- **Multi-User / Multi-Station**

Features & Benefits

- Use touch-screen Flat Panel or CRT with Jumbo "buttons"
- Start up quickly using predefined screen layouts
- Activate different menus (breakfast, lunch, mid-day, dinner, evening, etc.) automatically by time of day
- Activate "specials" for certain times of day on specific days
- Pre-set prices before a "launch date"
- Maintain multiple sales *locations* (bar, restaurant, lounge, etc.) within a single site
- Set up multiple stations up within each *location*
- Customize touch screen buttons for specific applications. Each button representing a system function, a menu item, a modifier, a list, a tender, or a discount
- Customize lists as much as necessary, e.g. salad dressing choices, meat preparation preference, or potato toppings
- Add multiple lists to an item, e.g. the 8 oz Blackened Sirloin Steak dinner entrée allows for variations to "doneness", preferred salad type and side dishes
- Maintain "floating tabs" used when the patron moves from one *location* to another *within the same site*, e.g. from lounge to dining room
- Customize server 'X' readings to include or exclude certain information, and to present information in any number of ways
- Customize a meal to the patron's requirements using modifiers on menu items
- Use unlimited menu items per menu per *location*
- Route receipts to any of 9 different printers by *location*, depending on the item type, e.g. food items routed to hot and cold prep printers while drinks go to the bar printer
- Set security to auto log out immediately (right after the transaction is finished) or after a delay (10, 15, 30 seconds or more)
- Use fast key modes in bars and fast food operations
- Handle multiple currencies simultaneously
- Accept many forms of payment
- Add overhead costs to (inventory) items
- Include one-time promotions as well as coupons, gift certificates, discounts, loyalty cards, and the like
- Predetermine discounts with optional operator override. Ideal for customer pick up, or seniors discounts
- Ensure tally is correct before generating the final bill with guest check review
- Correct a cash receipt applied to the wrong tender type with tender movement

Menu Point

More Features and Benefits

- Reverse transaction possible (security dependent)
- Handle transactions by business day versus calendar day
- Limit cash paid outs to certain users
- Print and/or display confirmations depending on the activity type, e.g. receipt printed for void transactions, but discounts are displayed only
- Prioritize and displayed items appropriately on the bill
- Price similar items such as domestic bottled beer, or domestic draft beer, etc using item price groups
- Duplicate items on a tab using the repeat function to
- Create items automatically that piggy-back other items. An example is where at one table patrons may ask for a glass, pint, or pitcher of beer, a double, etc.
- Construct recipes when using the Inventory Plus system for perpetual inventory management. Print recipes for patrons, if requested
- Use weigh scale for liquor inventory management when Purchasing Plus is used
- Add prepaid items to the tab without affecting the server's cash. These include lottery tickets, pull-tabs, cigarettes, etc., and are typically paid out by the server's own cash
- Set up surcharges to handle automatic gratuities, table minimum charges, room charges, special function surcharge, etc.
- Use refunds to reimburse customers for out of pocket expenses
- Choose user-defined receipt printers features rather than standard system printers
- Apply negative and positive value modifiers to decrease or increase the selling price, e.g. removing fries decreases the meal price by \$.50, or increasing by \$1.50 for adding Caesar's Salad
- Move items to other tabs if applied to the wrong tab
- Review bills easily at the touch of a button

Reporting

- Price Change Log
- G/L Distributions
- Price List
- Recipe List
- Transactions Report
- Sales by Category
- Comparative Sales
- Discount Analysis
- Server Sales by Item
- Server Sales
- Hourly report

Integration

- SAMCO's MenuPoint module can be run as a stand-alone application or integrated with Inventory Plus for total inventory management, Purchasing Plus for managing purchasing requirements, Chit Manager for club membership management, General Ledger for financial reporting, Accounts Receivable for on account customer management, and Sales Analysis for reporting. For a more complete system, add Accounts Payable, Bank Reconciliation, ODBC Toolkit, Time and Attendance, and Canadian Payroll
- Able to run on a number of platforms including Windows, Windows NT/2000/XP, Novell Netware, SCO Unix / Linux / UnixWare, Red Hat Linux, IBM's AIX, HP/UX, MAC OS X, and Sun Solaris.
