

Installation Instructions New Modules for Existing Install

These instructions are provided to assist you with the installation of a new module(s) for your existing Samco Power Accounting system. Additional technical information can also be found in your *Installation Guide* and *System Functions* user manuals.

1. Except for the user installing the new module(s), have all other users exit out of Samco Power Accounting.
2. Be sure that the release level on the CD ROM is equal to or higher than your current release. To check your current release press the **F4** key from the main menu. A window similar to the one on the right will appear. This window tells us that the user is at 6.7.50 or Version 6.7 Level 50. As long as the CD ROM reads Version 6.7 Level 50 or higher we can install with that CD. If not, find another CD at that level or request a new one from Samco Software Inc.
3. Insert the Samco Power Accounting CD into your CD ROM drive. Under Windows if the auto install starts press **TAB** to exit.
4. From the Samco Power Accounting main menu (any company ID, doesn't matter), change into **System Functions** and select **Update programs**.
5. Read and accept the license agreement.
6. Select **1** for CD install.
7. Confirm or update your Runtime license. If you are adding more users or changing platforms you can do so now.
8. A list of existing modules will be displayed. Add the new module(s) by setting it to **Y**. Press **TAB** when done to continue. All existing modules will be updated appropriately (if applicable) and the new module(s) installed.
9. Answer **Y** if asked to update the data. Once the update / install is complete enter in the serial number(s) and activation key(s) for the new module(s). All users can go back in and proceed with normal processing.
10. You will need to do a couple of things to activate the new module(s) within each company:
 - Go into **System functions -> Company information** and answer **Y** beside the module(s).
 - Go into **System functions -> Password -> Maintain package passwords** and change your user passwords to include the new module(s).
